APPENDIX 1.	4

1. Introduction

The Information Society Survey-ISS-Companies statistical operation provides periodic information with regards to the implantation of new Information and Communication technologies (ICT) in Basque Country companies. The data is collected at the establishment level.

The files for the Information Society-Companies (ISSC 2014) survey constitute a product for circulation directed at users with experience in the analysis and processing of microdata. This format provides an added value to users, permitting them to carry out data exploitation and analysis that, for obvious limitations, cannot be covered by current circulation in the form of tables, publications and reports.

This report describes the microdata file for establishments and their characteristics, which is based on the usefulness and quality of the information that is to be included, as well as the interest it may have for the generic user.

2. Criteria for selection of variables

This file contains a selection of variables collected in the survey for the selected establishment and its characteristics. The selection of variables has been carried out based on criteria for both confidentiality and quality, which are detailed below:

2.1 Confidentiality criteria

Maintaining the statistical secrecy of the informants is one of the main premises that govern this statistical activity. Therefore, the dissemination of any individual information collected under statistical secrecy must be carried out anonymously and in such a way that it cannot be associated with any specific company, not even via the content or disaggregation of the disseminated variables.

Therefore, in order to guarantee this safeguard, the following restrictions have been applied to the ISSC 2014 file:

- Under no circumstances are direct identification variables or data of a personal nature (national identity document, name, surname, addresses, telephone numbers, etc.) to be included.
- The maximum geographic disaggregation included is the province.
- The only numeric variables included pertain to the personal elevator.

2.2 Quality criteria

Data quality is one of the aspects to consider in the analysis and treatment of statistical products. The quality of statistical products can be defined in terms of certain quality factors promulgated by EUROSTAT: Suitability, precision and reliability, opportunity and punctuality, consistency and comparability, accessibility and clarity.

In this case and to select the variables to be included in the ISSC 2014 microdata file, we have focused on the first two aspects such as relevance: appropriateness (relevance or interest of the data for the end user); and the accuracy and reliability of the information.

2.2.1 Relevance

Given the large quantity of variables collected by the survey we have tried to include those assumed to be of greater interest and relevance to the generic user.

2.2.2 Precision and reliability

The main limitation in any survey by sample is due to the availability of information solely for the sample units and not for the total objective population. The sampling design of the survey will shed light on the level of representativeness that can be achieved with the information collected.

In the case of the ISSC the sample of companies is chosen systematically by Province. For the main variables and crosses of the survey the level of representation required is Provincial. However, the large number of variables and the high level of detail that can be achieved with the variables included in this file do not guarantee the statistical significance of all the operations or analyses that can be performed on this data.

The conclusions derived from studies or analyses performed on this data are the responsibility of the end user. Nevertheless, to give an idea of the quality of the information for a specific cross or disaggregation it is recommended that you consult the tables of survey sampling errors and the corresponding sampling errors calculation report, which show recommendations regarding acceptable levels of sampling error.

3. Registry design

The ISSC 2014 microdata file is in CSV format and is structured around the thematic areas collected by the survey for this statistical unit.

4. Description of variables

Includes the literals corresponding to the coding of each of the variables included in the file. See Appendix.

APPENDIX 1.

DESCRIPTION OF THE FILE MICRODATOS_ESIE_2014

1. Numbering

NUMBERING

2. Year surveyed

YEAR

3. Province

EEM_ESTR_THL

- | | |
|---|----------|
| 1 | Álava |
| 2 | Bizkaia |
| 3 | Gipuzkoa |

4. Economic activity of the establishment

CNAE09_P

- | | |
|----|--|
| 02 | Extractive Industries, Coke Plants and Oil Refining |
| 03 | Food, Beverages & Tobacco Industries |
| 04 | Textile, Garments, Leather & Footwear |
| 05 | Timber, Paper & Graphic Arts |
| 06 | Chemical Industry & Pharmaceutical Products |
| 07 | Rubber & Plastics |
| 08 | Metallurgy & Metal Products |
| 09 | Electronic & Computer Products Electrical Material & Equipment |
| 10 | Machinery & Equipment |
